

Mouse β -NGF protein

Cat #: PRP1143

Size: 5ug/20ug/100ug/1mg

Product Information

| | | | |
|---|---|------------|---|
| | Product Name: Mouse β -NGF protein | | |
| REF | Catalog Number: PRP1143 | LOT | Lot Number: Refer to product label |
| | Purity: > 98% as determined by SDS-PAGE | | |
|  | Storage: Store at -20°C | | Preparation method: E.coli |
| | Shipping: The product is shipped at ambient temperature. | | |

Background: Nerve growth factor (NGF) influences the survival and differentiation of a variety of neuronal and nonneuronal cells. The actions of this polypeptide result from binding to specific cell surface receptors which are present as both high and low affinity sites. Although both types of receptor bind NGF only the high affinity form is capable of signal transduction. Cross-linking studies with 125I-NGF have shown that the high affinity receptor of PC12 cells forms an Mr 158,000 complex with NGF while the low affinity receptor forms an Mr 100,000 complex. Full length cDNA clones for both the human and Mouse NGF receptor genes have been produced and sequenced, revealing greater than 90% homology between the two species.

Sequence: Amino acid sequence derived from Mouse β -NGF protein (P01139) (Met121—Gly241) was expressed with 6×His tag at the C-terminus.

Protein length: The protein has a calculated MW of 14.41 kDa. The protein migrates as 11-17 kDa under reducing condition (SDS-PAGE analysis).

Biological Activity: Measure by its ability to induce TF-1 cells proliferation. The ED₅₀ for this effect is <1ng/mL. The specific activity of recombinant Mouse β -NGF is > 1 x 10⁶ IU/mg.

Endotoxin: <0.1 EU per 1 μ g of the protein by the LAL method.

Formulation: The protein was lyophilized from a 0.2 μ m filtered solution containing 20 mM sodium citrate, 0.2 M NaCl, pH 4.5.

Storage Instructions: Lyophilized protein product should be stored desiccated below -18°C. Upon reconstitution, the protein

should be stored at 4°C between 2-7 days and for future use below -18°C. For long term storage it is recommended to add a carrier protein (5% HSA , 10%FBS or 0.1%BSA). Please prevent freeze-thaw cycles.

Usage notes: Always centrifuge tubes before opening. It is recommended to reconstitute the lyophilized recombinant Mouse β -NGF protein to a concentration of 0.1-1 mg/mL in sterile ddH₂O, and keep at room temperature for at least 20 min to fully dissolve. Please avoid vortex vigorously

Note: The product listed herein is for research use only and is not intended for use in human or clinical diagnosis. Suggested applications of our products are not recommendations to use our products in violation of any patent or as a license. We cannot be responsible for patent infringements or other violations that may occur with the use of this product.
